Ing. Linda Schipani S.r.l. Art & Engineering for environment

Linda Schipani, is an Italian environmental engineer

who, linking her profession in waste management with her passion for art and technology, develops an innovative project to reduce the environmental negative impact of the industrial processes.

The strategy she proposes to every productive activity, called *ArtEcoDesign*, is to realize new products using waste materials and optimizing every possible resource through environmental sustainable cycle fed by creative power.

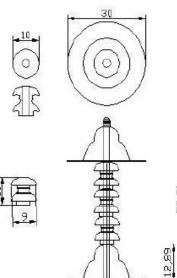

The idea takes form in the electrical and electromechanical family's factory with the aim to save old industrial materials through their transformation in pieces of art and design elements.

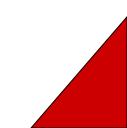

Old unused components of electrical and street lighting systems, such as metallic covers, ceramic isolators, light bulbs, Pvc tube, wooden bobbins and pallets, takes a new electrical and ecological design register as

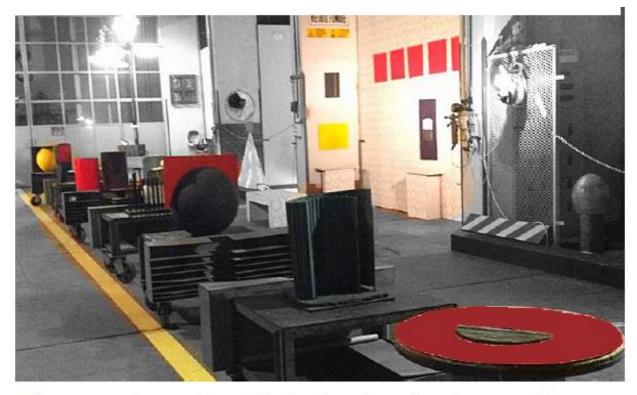

<u>EcolectricDesign</u>

58,31

An experience in which she involved more than one hundred artists, one collective exhibition for each materials, creating a truly unique art-collection exhibited in her fascinating industrial space.

EcoLectricDesign proposes itself as a possible model of environmental strategy, to be adopted by different industries with the purpose of minimizing the production of waste by means of a smart, positive, creative and ecological approach to the problem:

ArtEcoDesign in Factory

creates your own green products under a new eco-brand conceived for your activity

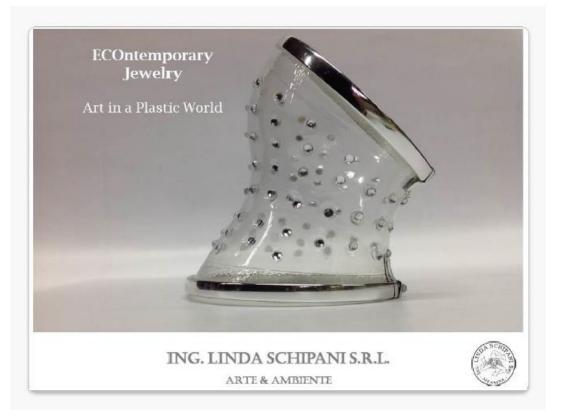

A lot of waste could be an important resources for a cultural and economic growth all over the world.

An exhibition in a St. Moritz jewelry takes shape from a landfill of Dakar because art can change materials

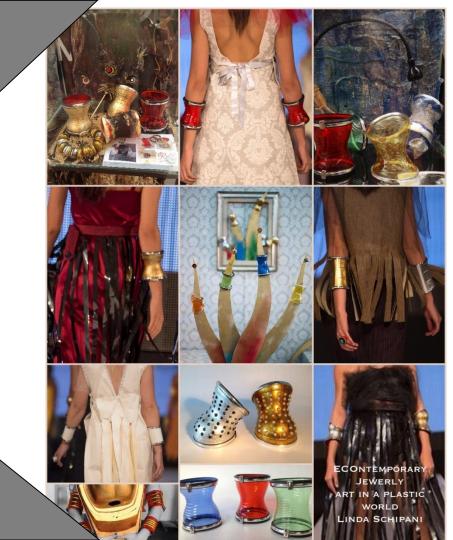

The art and engineering can turn a plastic bottle into a precious jewelry through a project that combines luxury and environmental sustainability

Plastic, paper, films and electrical components become ECOntemporary jewels and fashion, bringing environmental sustainability on the international catwalk.
